

Replicaset

```
controlplane:~$ cat rs.yaml
apiVersion: apps/v1
kind: ReplicaSet
metadata:
  name: frontend1
spec:
  # modify replicas according to your case
  replicas: 3
  selector:
    matchLabels:
      tier: frontend
  template:
    metadata:
      labels:
        tier: frontend
    spec:
      containers:
      - name: nginx
        image: nginx
```

Replicaset yaml file using nginx image it will create 3 replicas.

```
controlplane:~$ vi rs.yaml
controlplane:~$ kubectl apply -f rs.yaml

deleted a pod but replicaset created another pod.

scale the pods 3 to 5 using kubectl scale command.

```
frontend1-w5gb5 1/1 Running 0 3m16s
controlplane:~$ kubectl scale --replicas=1 replicaset/frontend1✓

controlplane:~$ kubectl get pod
NAME READY STATUS RESTARTS AGE
frontend1-z8vnb 1/1 Running 0 5s✓
```

decrease the pod from 5 to 1.

I updated the Docker image in the YAML file and applied the changes using `kubectl apply`. However, when I checked the Pod description, it still showed the old image. After deleting one of the Pods managed by the Replica Set, a new Pod was created, and upon describing the new Pod, I found that the image had been updated to the new version.
